

Nilcra® Zirconia Frac Buttons for Composite Slips

Originally referred to as 'Ceramic Steel', Nilcra® Zirconia is a unique transformation toughened material that is more structurally reliable than any other ceramic.

High strength and toughness, excellent corrosion resistance and much harder than metals.

Benefits of Nilcra® Zirconia Frac Buttons:

- Custom made parts to clients drawings and specifications
- Precise dimensional accuracy
- Easy to mill out
- Flexible stocking arrangements

Morgan Advanced Materials

At Morgan we focus on solution driven technologies, solving our customer's most challenging and arduous severe service problems. This is achieved by combining application engineering knowledge together with our unique portfolio of ceramic materials.

Our products are used in industries as diverse as energy, mining, mineral processing and materials handling industries.
